Chandigarh, Punjab, India

SUMMARY

Motivated Computer Science (AI) undergraduate with hands-on experience building full-stack web applications using the MERN stack, RESTful APIs, and cloud-integrated systems. Proven ability to ship production-grade features — from React frontends to Node.js backends — with a strong foundation in performance optimization, authentication, and ML-powered services.

EDUCATION

RIMT University

B.Tech in Computer Science (Artificial Intelligence)

Chandigarh, India

Aug 2023 – Aug 2027

- CGPA: 8.0/10
- Relevant Coursework: Data Structures & Algorithms, Web Development, Database Systems, Machine Learning, Operating Systems

EXPERIENCE

AI Research Intern

Punjab Engineering College (PEC)

Jun 2025 – Jul 2025

Chandigarh, India

- Architected a full-stack AI inference platform using **Streamlit (Python)** as the frontend and integrated YOLOv5, DeepFace, and MediaPipe models into a unified backend pipeline achieving **92% accuracy**.
- Engineered real-time media processing supporting images, video files, and live webcam streams with **sub-100ms end-to-end latency** via optimized server-side inference.
- Reduced model inference time by **30%** through quantization and edge-deployment optimizations, improving scalability for concurrent users.
- Delivered a working MVP within a 2-month timeline, demonstrating ability to scope, build, and ship a full product under constraints.

Google Student Ambassador

Google

Sep 2025 – Jan 2026

Punjab, India

- Organized and led technical workshops on cloud computing and web development, reaching **200+ students** across campus events.
- Collaborated with Google engineering teams to design and deliver structured learning programs on Google developer tools and APIs.
- Mentored peers on modern tech stacks, career development, and open-source contribution, building a sustained developer community.

PROJECTS

Airbnb Clone | MongoDB, Express.js, React, Node.js, Redux, JWT

2026

- Built a full-stack Airbnb-inspired property rental platform with **user authentication, property listings, search/filter functionality, and booking management**.
- Implemented **Redux** for global state management and optimized MongoDB queries, reducing average page load time by **40%**.
- Secured all API endpoints with **JWT + bcrypt** for token-based authentication and password hashing, following OWASP best practices.
- Designed a fully **RESTful API** layer (Express.js) with modular route controllers and middleware for auth, validation, and error handling.

Cost Guardian | React, Node.js, Express.js

2026

- Built a full-stack expense management web app during **Economics Times Hackathon** to detect cost leakages and optimize organizational spending.
- Developed an intelligent dashboard in **React** that visualizes expense patterns, flags anomalous spending, and categorizes cost leakage areas in real time.

- Engineered a **Node.js/Express** backend that analyzes submitted expense data and returns AI-driven root cause analysis with actionable cost-reduction recommendations.
- Designed an end-to-end user flow — from expense input to automated diagnosis — enabling non-technical users to identify and act on financial inefficiencies.

Crop Detection & Weather Analytics System | *Python, TensorFlow, React, Node.js, MySQL* 2025

- Built an end-to-end full-stack web application with a **React** dashboard and **Node.js/Express** backend serving **500+ API requests/day** at **99.5% uptime**.
- Integrated a third-party **weather REST API** and a CNN-based disease detection model (89% accuracy) into a unified backend service.
- Designed a responsive, mobile-first React frontend with real-time data rendering and actionable recommendation cards for end users.
- Structured and managed agricultural dataset using **MySQL**, writing optimized queries for data retrieval and analysis.

AI Multi-Modal Recognition System | *Python, YOLOv5, Streamlit, OpenCV, MediaPipe* 2025

- Built a multi-model computer vision web app combining object detection, emotion recognition, and gesture detection in a single Streamlit interface.
- Optimized full inference pipeline for near-real-time performance (<100ms latency) and edge deployment readiness.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, HTML5, CSS3

Frontend: React.js, Redux, Responsive Web Design, REST API consumption

Backend: Node.js, Express.js, RESTful API Design, JWT Authentication, bcrypt

Database: MongoDB, MySQL, PostgreSQL

Python Libraries: TensorFlow, OpenCV, Streamlit, scikit-learn, NumPy, Pandas

DevTools: Git, GitHub, Postman, VS Code, Linux

CERTIFICATIONS

Cybersecurity Analyst Job Simulation – Tata Consultancy Services (Forage)

Remote Sensing, GIS & GNSS – ISRO (Indian Space Research Organisation)

ACHIEVEMENTS

- Selected as **Google Student Ambassador** from a competitive nationwide pool – representing Google on campus (2025).
- Completed a research internship at **Punjab Engineering College**, one of India's premier engineering institutions.
- Active open-source contributor with focus on AI tooling and full-stack web projects on GitHub.
